**General National Pollutant Discharge Elimination System (NPDES)
Permit for Discharges of Treated Groundwater Associated with
Underground Storage Tank Remediation**

Permit No. TNG830000

February 15, 2008

Administrative Record

The permit rationale (or fact sheet) sets forth the Division of Water Pollution Control's (division) basis for permit conditions to be applied statewide for the issuance of the new Tennessee General NPDES Permit for Discharges of Treated Groundwater Associated with Underground Storage Tank Remediation (UST). The UST General Permit is intended to authorize the discharge of effluent from treatment of groundwater that has been contaminated by petroleum from an underground storage tank, to surface waters of the State of Tennessee.

The previous UST General Permit expires on February 29, 2008. On November 5, 2007, the division published Public Notice #MMVII-021, which announced our intent to issue the new UST General Permit. Copies of the draft UST General Permit were made available in electronic format on the division's web site at http://state.tn.us/environment/wpc/ppo/dtg_tng830000.shtml. On November 5, 2007, the division issued Public Notice No. PH07 - 035, which announced the public hearing that was held on Monday, December 10, 2007. The division received comments through December 20, 2007.

Report of Hearing

No comments from general public or permittees were received during either the public hearing or comment period.

Determination

The division's decision on this matter is to issue the General NPDES Permit for Discharges of Treated Groundwater Associated with Underground Storage Tank Remediation, Permit No. TNG830000.

DATE: February 15, 2008

Vojin Janjić,
Manager, Permit Section
